[CORAVIN SELECTIONS BY THE GLASS]

The Coravin Wine Preservation System uses a medical grade needle and a proprietary capsule of Argon gas to pour a bottle of wine through the cork. The cork is never removed, which helps prevent oxidation, increasing the longevity of the wine. It accomplishes this by first inserting a hollow needle through the cork. The user then presses a trigger to pressurize the bottle with argon gas. When the user releases the trigger, the wine pours into the glass. The needle is removed from the cork, a naturally elastic and porous material, which then reseals, protecting the wine from oxidation and leaving the remaining wine unaffected
